

Skin Cancer ('Black Salve')

DO NOT USE THIS UNTIL YOU TALK WITH SOMEONE WHO IS KNOWLEDGEABLE ABOUT THIS METHOD!!

If a person has skin cancer, this method will have a dramatic effect. This is an extremely painful treatment. It will actually burn out the old rotten flesh. Have you heard of Dr. Hoxsey? This treatment is similar to the Hoxsey treatment. He was famous for being able to burn out old cancerous tissue.

3 Tbsp bloodroot
6 Tbsp. zinc chloride*
2 Tbsp. poke root (fresh, chopped)

*Obtain zinc chloride from a pharmacist. They will not give it to you if they think you are going to use it on the skin. It is used for treating minerals.

Make a past and apply it over the cancerous sore. It will burn almost immediately. Keep applying it until, when you take the bandage off, a big plug comes out. **If the skin cancer is too close to the eyes, you CANNOT use this treatment**

Shamrock Salve

Shamrock or lemon grass

Pick a cup and place in blender with enough water to make a paste. Put in covered jar and place in sun. It will turn black. When it turns black, apply to the skin cancer. It also burns off the rotten tissue. A large plug will fall out. When this takes place, the cancer has been destroyed.

Other remedies:

-Freshly crushed garlic can be applied to skin cancer.

-Mix the following to make a paste:

1 part bloodroot

2 parts pokeroot

2 parts goldenseal

When applied, if it is truly cancer, it will burn; if not cancer, skin will not burn.

You can also apply these treatments for breast cancer.
